

MIMS Australia has been publishing medicines information **since 1963**.

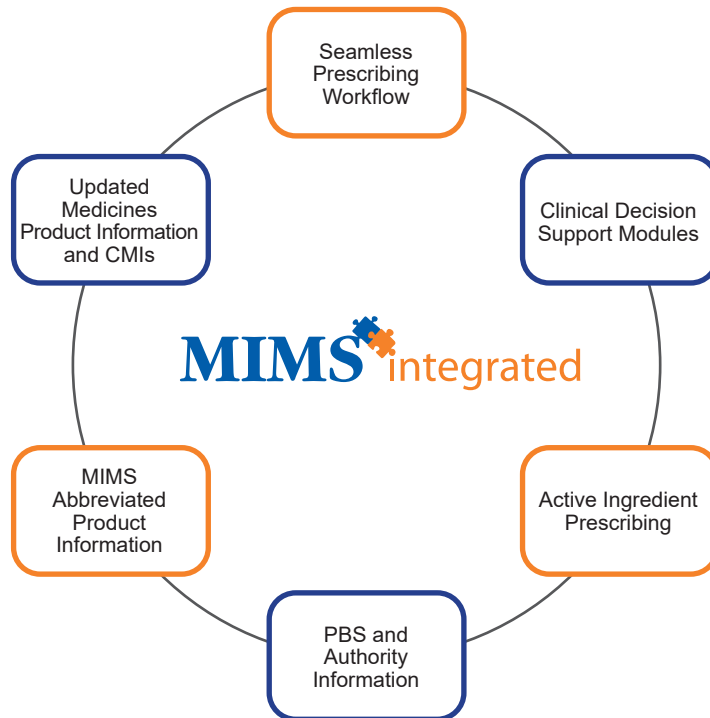

The acronym, MIMS, was derived from the original publication which was called Monthly Index of Medical Specialties.

MIMS is the **leading supplier** of **trusted, quality, independent medicine information** to Australian Healthcare professionals, known for its high level of editorial integrity and independence.

MIMS distributes range of products **to a wide cross section of Australian healthcare market**, from hospitals to aged care, medical practitioners to pharmacists, dentists and nurses, health services to border protection authorities.

The Benefits of MIMS Integrated:

- Instant access to latest Australian based medicines information and PBS information
- MIMS Integrated information is updated monthly
- Access evidence-based interactions with MIMS Clinical Decision Support modules like drug interactions, health conditions, known allergies and duplicate therapy
- Access to latest TGA approved Product Information and CMI
- Seamless prescribing workflow with MIMS Integrated database embedded in your Practice Management System
- Reduce risk of medication adverse effects and enhance patient safety
- Independent and high-quality information

Clinical Decision Support Modules

Interactions alert for drug-drug, drug-allergy, drug-disease, drug in lactation, drug in pregnancy and duplicate therapy for patient safety

Active Ingredient Prescribing

Medications that are on the List of Excluded Medicinal Items (LEMI) and List of Medicines for Brand Consideration (LMBC) for AIP are flagged in MIMS database

PBS and Authority Information

- Pharmaceutical benefits information for medicines that are part of the Pharmaceutical Benefit Scheme including any authority details, updated monthly on MIMS database

Updated Medicines Product Information and CMIs

- **Product Information** – TGA approved product information for clinicians
- **Consumer Medicines Information (CMI)** - Patient handouts that include general medicines information, such as the use of medication, how to take the medicine and side effects
- **MIMS Abbreviated Product Information** - Product summary prepared by MIMS editorial team including indications, precautions and dosage
- **TGA programs** - MIMS includes Black Triangle Adverse event reporting, the full Product Information and CMI in the new format

Other Information

- Real Time Prescription Monitoring – MIMS flags drugs which need to be reported with RTPM systems in VIC, TAS, SA and QLD
- Electronic Prescribing – Poison schedules, including flags for S4D drugs in NSW and TAS
